

# Renal and Hepatic Impairment Studies

Integrated teams, specialized infrastructure and direct access to experts from startup through study execution.

**600+** Combined impairment studies

## Expert Leadership

Dr. Harry Alcorn, PharmD

- ✓ Credible design guidance
- ✓ Stronger site engagement
- ✓ Practical feasibility
- ✓ Enrollment predictability

## Full-Service CRO Solutions

-  Project Management
-  Data Management
-  Biostatistics & Programming
-  PK/PD Analysis
-  PK Modeling & Simulation
-  Clinical Monitoring
-  Medical Monitoring
-  Medical Writing
-  Central Laboratory

## Our Model for Organ Impairment Studies

DVCR has developed a site-centric model for organ impairment studies that blends expertise and collaboration, ensuring that each study is executed with precision and efficiency.

### Strategic site partnerships

We assign only tenured project managers who have demonstrated success in managing multicenter clinical pharmacology trials and are supported by our in-house experts.

### Patient access & expert oversight

We have established strategic partnerships with top-tier, experienced sites and PIs that consistently meet enrollment targets and provide direct access to the appropriate patient population networks.

### Proactive Communication

We establish clear governance charters and communication to mitigate delays and maintain study momentum.

### Expedited Site Payments

We accelerate site payments to de-risk study delays and maintain site engagement and study prioritization. When sites are engaged, they recruit faster, which helps protect the study's timeline and budget.

### Experienced Project Managers

Seasoned project managers deliver timely and efficient project oversight and ensure successful study execution from start to finish.

### Comprehensive CRO Services

DVCR offers full-spectrum CRO services, ensuring seamless study processes and high-quality data.
